

**Equipment Specialist (Electronics), GS-1670**

In this position the incumbent will serve as an equipment specialist for the Tactical Operations Center (TOC), assigned to Tobyhanna Army Depot. Work is performed at PCS (Permanent Change of Station) sites in the Continental United States (CONUS), embedded, or at a Forward Repair Activity (FRA), CONUS or Outside the Continental United States (OCONUS) locations. Exercise continuing responsibility for a comprehensive range of field use support activities for components of the system and subsystems of the Tactical Operations Centers. Provide necessary training and maintenance assistance on individual equipment, and/or subsystems as various radio equipment configurations, computer systems include processors, servers, and routers. Aligns, calibrates and otherwise interfaces and integrates all subsystems and equipment into a functional system. Fabricates needed test fixtures when required. Records test data and recommends system or circuit modifications or changes documentations.

**Equipment Specialist (Electronics), GS-1670**

In this position the incumbent will serve as an equipment specialist for ADAM cell systems. The incumbent will identify problems, isolate and repair complex electronic technical defects in the system and related equipment, and provide maintenance support, such as, assisting and teaching site personnel a variety of maintenance, troubleshooting, and repair techniques to be applied when attempting to restore systems operations. Serve as technical advisor to corps, group, battalion, and company commanders and all levels of maintenance officers on matters related to maintainability of mission tactical operation centers. Make decisions such as performing depot maintenance on-site, substituting equipment, repair parts and components, determining what equipment, replacements units or subassemblies should be evacuated to depot for repair and if software program changes are required. Provide advice, assistance, on-the-job training and instructions to users on the operation and maintenance of the ADAM cell hardware and software.

**Equipment Specialist (Electronics), GS-1670**

In this position the incumbent will serve as a Program Manager/Equipment Specialist in the Southwest Asia Theater to oversee all Tobyhanna Army Depot related activities/tasks and act as the primary POC for TYAD Forward Repair Activities (FRA) in support of the Program Manager Counter Remote Controlled Improvised Explosive Device Electronics Warfare (PM-CREW). Incumbent serves as the equipment specialist for all systems located in the assigned region. Serve as the PM -CREW liaison between Joint Crew Composite Squadron (JCCS-1), Combined Joint Task Force Paladin (CJTF-82), TYAD, and AFSB Commanders. Coordinates Property Book Unit Supply Enhanced (PBUSE) and CREW system training for all TYAD personnel, as required. Manages transportation, network, communications and utility service agreements. Notifies the PM of material defects utilizing the Quality Defect Reporting (QDR) process. Provides PM CREW with monthly activity reports for asset tracking. Oversees the operations of various Tobyhanna Army Depot assigned Regional Support Centers (RSCs) that provide technical and logistical support to PM-CREW assets. Provides technical and logistical guidance to Tobyhanna personnel assigned as RSC Site Leads.

Provides on-site technical and maintenance assistance, analyzes complex technical problems, and provides training to site operations and maintenance personnel. Must be thoroughly knowledgeable of these specific complete systems and subsystems to include all mission-peculiar equipment and software in order to identify problems, provide necessary training and maintenance assistance on individual equipment, and/or subsystems as various electro-optic surveillance equipment configurations. Incumbent is responsible to repair and maintain specialized test sets and fixtures required to support CREW Systems. \*\*Incumbent will perform aforementioned assignments in the Southwest Asia theater.
